

AirBoss Defense Molded CBRN Gloves

AirBoss® Defense Molded CBRN Gloves are injection molded using bromobutyl and provide 24-hour of continuous protection against CW agents (based on stringent military test methods). They are impermeable to all biological agents, and they provide excellent protection against a wide range of toxic industrial chemicals (list available upon request). They fit better, don faster, and last far longer than dipped gloves. They have round fingertips which allows for optimal sensitivity, and a textured finish on fingertips and palms for a superb grip. With its unique sizing system, the AirBoss® Defense Molded CBRN Gloves are manufactured to fit more than the 95th percentile of the population of men and women. AirBoss® Defense Molded CBRN Gloves can be purchase with or without the removeable patented CoolMax® Liner to provide improved comfort and sweat management. Their snug wrists keep the chemical gloves firmly on hands. The CoolMax® Liner can also be purchase separately and comes in 3 sizes, small, medium, large.

Specifications

Operational Range.....	-45°C to 70°C (-49°F to 158°F)
Storage.....	-50°C to 60°C (-58°F to 140°F)
Shelf Life.....	15 years in original package if properly stored
Sizes.....	7
Color.....	Black
Weight (without filter).....	135g (4.76 oz) per pair (size L, not including liners)
Packaging.....	Low-profile vacuum packed (size L, 365 cm³)
Also available.....	Coolmax® Lycra removable liner for even greater comfort and sweat management

Excellent Fit

AirBoss® Defense Molded CBRN Glove is manufactured to fit more than the 95th percentile of the population of men and women. Each glove can be purchased with or without with CoolMax® Liners for sweat management and easier donning and doffing.

Excellent Dexterity and Ambidexterity

Lightweight and seamless with textured fingertips, the AirBoss Molded CBRN Glove provides extra-high dexterity and tactility. The AirBoss Molded CBRN Glove is the only Molded ambidextrous CBRN glove of its kind.

Tear Resistance

Despite being only 0.56mm (+0.20mm, -0.15mm) thick (measured at the crotch and cuff), the AirBoss Molded CBRN Glove is remarkably tear resistant.

Extended Protection and Ease of Decontamination

The AirBoss glove provides 24-hour protection against CW agents and a variety of TIC threats. It can be decontaminated easily in the field.

Anti-Static

The glove's anti-static properties are a major benefit in potentially explosive situations. Wearers are able to ground themselves and remained gloved, thus uncontaminated, when fuelling vehicles or aircraft.

Compatible

The AirBoss Molded CBRN Glove fully integrates with CBRN suits.

Accurate Sizing

Available in seven sizes: Small, Medium Narrow, Medium, LargeNarrow, Large, Xtra-Large Narrow, Xtra Large
