

## Cyalume Emergency LightStation

Cyalume Emergency LightStations provides easy-to-find, bright, portable, reliable light when filled with twenty 10-inch SnapLights (sold separately) that last for 4 hours each. The prominent red, fire resistant label and a glow-in-the-dark label makes the LightStation instantly identifiable in the dark when the power goes out. As the LightStation is opened, one SnapLight is activated to provide area lighting, leaving the remaining 19 to be activated as needed with a simple bend, snap, and shake. The LightStation can be mounted to the wall near exits, fire extinguishers, within transportation systems, or in rooms and hallways that have little or no emergency lighting. Each LightStation is sealed with pins that provide a visual alert of use or tampering. Lightstations are sold empty and come in two sized cases. Snaplight refill and tamper pins available.
