

Hospital Aids Ski Evacuation Pad

The Ski Evacuation Pad is a two person device for the evacuation of non-ambulatory patients. It is an ideal evacuation device when staircases, doorways, or fire escapes are too narrow to allow for mattress evacuation. The Ski Evacuation Pad simply slips under the patient. If available, the patients bed linens and pillows can be used for added warmth and comfort. The Ski Evacuation Pad comes complete in a storage bag (included) which can be wall mounted at the head of fire escapes, in patient rooms, or along corridors. The durable vinyl coated base material enables the Ski Evacuation Pad to slide on any surface, while the internal foam offers the patient cushioned protection.

Features

- Durable Vinyl coated base material enables the Ski Pad to move over virtually any interior and exterior surface
- 2 inch foam pad provides patient with protection against bumps and bruises
- Three straps with seat belt style metal buckles and webbing
- Foot pocket to secure patient and keep patient from sliding
- Quick and easy evacuation of non-ambulatory patients
- Wall-mountable
- Wipe clean materials, and reusable
