

## Hospital Aids Ski Evacuation Sheet

The Ski Evacuation Sheet allows non-ambulatory patients to be evacuated safely and securely cocooned within their mattress. The Ski Evacuation Sheet remains in place at all times under a patient's mattress, and is therefore instantly accessible. When needed, users simply remove the straps from their storage pockets and secure over the patient. The patient, once enveloped in their mattress, is then slid off the bed and taken to safety using the head/foot end handles.

### Features

- Engineered for safe, secure mattress evacuation
- Durable material enables the Ski Sheet to glide over surfaces
- Straps with seat belt style metal buckles and webbing
- Easy accessible pockets for the storage of the cross straps when not in use
- Elastic corner straps for the secure attachment of the Ski Sheet to the underside of the mattress
- Strong, durable, pulling handles at each end

<b>Packed Dimensions</b>	10.5" x 4" x 5" approx.
