

First Line Technology Enhanced Decon Systems (EDS)

EDS Active Kits

The First Line Technology Enhanced Decon Systems (EDS) are the only rapid deployment Hybrid Decon go-bags with the power of Dahlgren Decon and FiberTect. The EDS has the power to decon 6, 12, or 24 personnel (depending on configuration chosen) with everything needed for fast and effective Hybrid Decontamination™ of hundreds of known and emerging threats. The EDS can be carried easily and can be quickly deployed, even in extreme temperature conditions where most other decontamination solutions are unusable. The EDS can be made fully operational by one person in only a few minutes and does not require any source of water or power. The system requires only two personnel to operate and contains everything needed to complete full technical decontamination from tool drop to waste disposal. After deployment, replenishment items can be purchased as needed without having to purchase an entire kit.

EDS Training Kits

EDS Training Kits contain inert versions of Dahlgren Decon and FiberTect that accurately replicate the look, feel, and smell of the real world solution for realistic training.

EDS Active and Inert (Training) Kits are available in three (3) Sizes – EDS6, EDS12, EDS24

The EDS is built around the concept of Hybrid Decon utilizing Dahlgren Decon and FiberTect. Hybrid Decon is designed around the BAR Method

The **BAR** Method

Blot
away visible contamination

Apply
decontamination solution

Remove
remaining waste
